Assignment no :- 02

P.S:CREATE MFA FOR AUTHENTICATION SOLUTION.

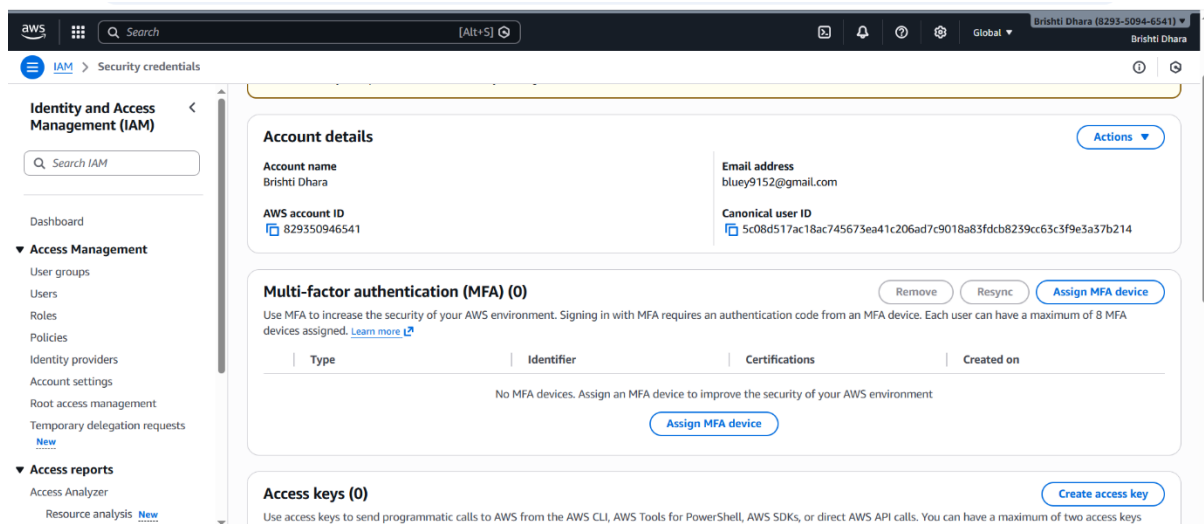

Solution: --

Step-1: At first, we need to open the AWS console.

Step-2: Then go to the "Security Credentials". And open it.

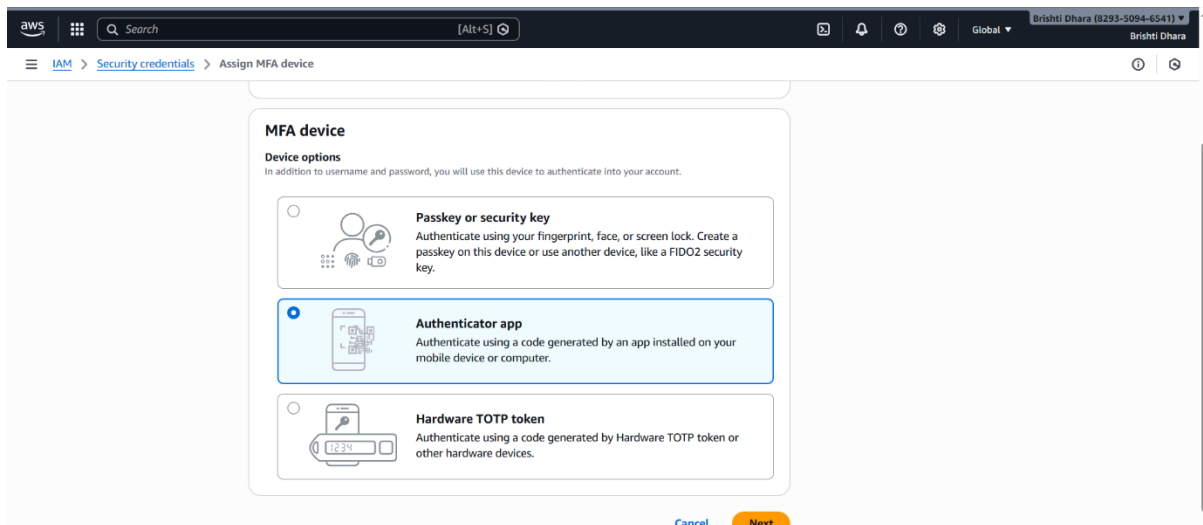

Step-3:Then scroll down and we find "MultiFactor Authentication". There we click on "Assign MFA device".

”

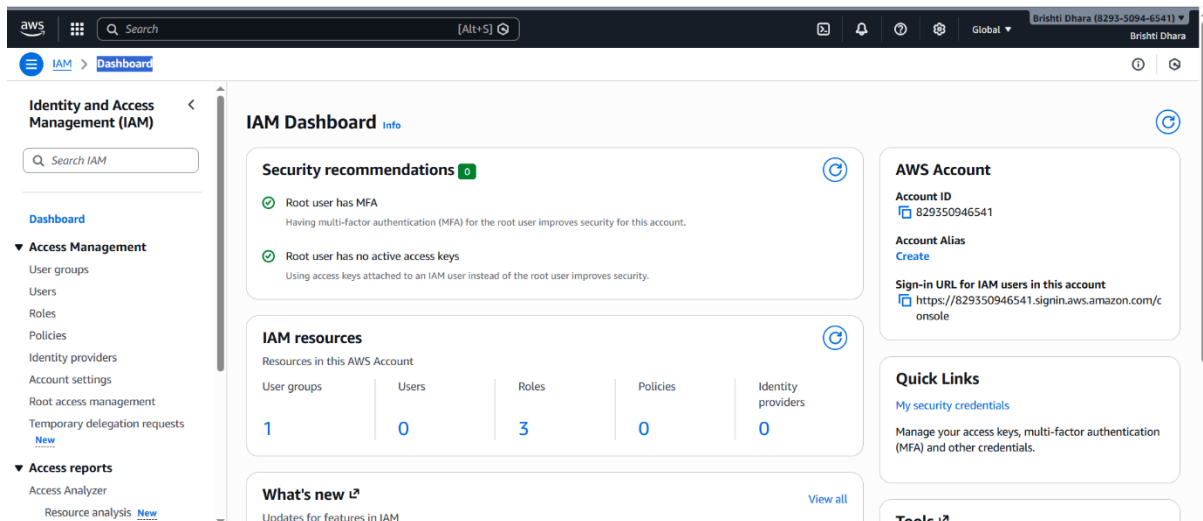

Step-4: In the next page we need to set “Device name”, the among of three types of MFA Choose “Authenticator App”

Step-5:Then press Next.

Step-6:Then in the next interface we need to scan the QR code by GOOGLE AUTHENTICATOR app.

Step-7: after that we write two consecutive code from the app into two given field. Step-8: Then Click “ADD MFA”

Step-9: MFA is successfully created.
